Positioning & Strategic Recommendations

DUNFORD POSITIONING STATEMENT

For athletes and coaches who need verifiable, tamper-proof AI coaching analysis, Velo is an on-chain AI coaching protocol that gives athletes a permanent, athlete-owned training record with cryptographically signed AI receipts. Unlike traditional platforms (Hudl, SwingVision) that own athlete data and can delete it, and unlike blockchain AI platforms (SingularityNET, Fetch.ai) that have no sports focus, Velo delivers autonomous two-agent analysis with on-chain accountability — on Somnia's purpose-built Agentic L1.

TOP 3 STRATEGIC RECOMMENDATIONS

01 LEAD WITH DATA OWNERSHIP

Every competitor's data lives on their servers. Velo's lives on-chain, owned by the athlete. Make this the #1 message in all marketing — it is unmatched by any current competitor in this space.

02 EXPLOIT THE AI AUTONOMY GAP

No sports coaching platform today runs autonomous AI agents. SwingVision and HomeCourt require human-in-the-loop review. Velo's agent runner acts without human intervention after payment. Demo this prominently — it is the clearest product differentiator.

03 TARGET COACHES, NOT ATHLETES

The buyer is the coach. They have budget, they need scale, and they are frustrated by Hudl's \$1,500+ enterprise pricing. Position Velo as the affordable, verifiable alternative — pay-per-job, no subscriptions, no lock-in.

02 — COMPETITIVE LANDSCAPE

Company Profiles

COMPANY	CATEGORY	PRICING	STRENGTH	KEY WEAKNESS
V e l o &	On-chain AI coaching	Pay-per-job (STT)	Two-agent receipt chain, athlete-owned NFT record	Pre-launch, no user base yet
SwingVision	AI tennis coaching	\$99.99/year	Best-in-class tennis AI, serve speed tracking, 200k+ users	Data locked to platform, no blockchain, no agent economy
HomeCourt	AI basketball coaching	\$9.99/month	Strong NBA partnerships, 3M+ downloads, AI shot tracking	Basketball only, no verifiable receipts, no agent layer
Hudl	Video analysis platform	\$500–2,000+/yr	Market leader, all sports, 150+ countries, team workflows	Enterprise price, no AI agents, no blockchain, data owned by Hudl
SingularityNET	Decentralized AI market	Token-gated (AGIX)	Blockchain AI marketplace, large ecosystem, AGI brand	No sports focus, complex UX, not athlete-friendly
Fetch.ai	Autonomous AI agents	Token-gated (FET)	Agent autonomy, blockchain-native, strong infra	No sports/coaching use case, developer-only product
STEPN	Move-to-earn fitness	NFT + token model	Proven blockchain fitness model, 3M+ users	Gamified only, no coaching analysis, no AI receipts

& Velo is the analyzed product. Profile based on codebase and contracts, not independent review

Capability Comparison

Strategic 2×2: Agent Autonomy vs. Data Ownership

Axes chosen based on buyer decision criteria: autonomous capability and athlete data control.

The top-right quadrant — high agent autonomy + high athlete data ownership — is currently unoccupied except by Velo. This is the white space the protocol was built to own.

Gaps No One Serves Well

AUTONOMOUS AGENT COACHING

Zero competitors run autonomous AI agents that act on-chain without human triggers. Every platform (SwingVision, HomeCourt, Hudl) requires human review before analysis is delivered. Velo's agent runner closes a full workflow automatically after payment.

ATHLETE-OWNED PERMANENT RECORDS

All major platforms (Hudl, SwingVision) store athlete data on their servers. If the athlete cancels, the history disappears. Velo's soulbound NFT is non-transferable and permanent — the athlete owns it forever, regardless of the coach's subscription status.

VERIFIABLE AI RECEIPTS

No coaching platform can prove their AI did the work. Velo's EIP-712 receipt chaining means every analysis is cryptographically signed and the two-agent dependency is enforced on-chain — anyone can verify what happened and when.

PERMISSIONLESS AGENT ECONOMY

SingularityNET and Fetch.ai have agent marketplaces but no sports focus. Velo's AgentRegistry is permissionless — any developer can register a specialized sports AI agent, creating an open marketplace of coaching agents that coaches can select from.

KANO ANALYSIS — WHERE IS THE BAR MOVING?

Basic (table
Defender (today's
stakes):
surprise =
tomorrow's
basic):

Analysis accuracy, latency, sport coverage — all competitors have this
Analysis accuracy, latency, sport coverage — Swingvision and Hudl lead here
On-chain receipts, agent autonomy, athlete-owned data — Velo owns these. In 12–18 months these will be expected.

Top Actions & Battlecard

USE HUDL'S PRICING AS A WEDGE

Hudl charges \$500–2,000+/year. Velo is pay-per-job with no subscription. In every pitch: lead with 'you pay only when an agent delivers a verified analysis.' Trap question for coaches: 'Do you know where your athlete's analysis lives if you cancel Hudl?'

EXPLOIT SWINGVISION'S DATA LOCK-IN

SwingVision's top user complaint (G2/App Store) is data portability — users can't export their history. Run a 'Bring Your Data Onchain' campaign targeting SwingVision's existing tennis user base. Offer a free first job as migration incentive.

DEMO AUTONOMY LIVE, NEVER IN SLIDES

The single most powerful Velo demo: coach pays in the web app, walks away, and 30 seconds later the athlete's NFT is updated — no human involvement. This cannot be shown in a slide. Every pitch must include a live terminal showing the agent runner responding in real time.
